“No mass disorder...afflicting humankind has ever been brought under control by attempts to treat afflicted individuals.”

George Albee Ph.D.
Going “Upstream” to Prevent Child Sexual Abuse

1. Behaviors preceding interest in children
2. Being sexually abused preceding abuse of others
3. Screening for adults with risk of sexually abusing
4. Training how to identify abused/abuser
5. Therapy for abused and abuser

CHILD MOLESTATION RESEARCH & PREVENTION INSTITUTE
What is the Definition of Pedophilia?

1. Be sexually aroused by,
2. Have intense fantasies of,
3. Or be involved in sexual behavior with a:

- Prepubescent child or children (generally 13 years of age or younger)
- For at least six months
- Be at least 16 years old, and
- Be at least five years older than the child.

Source: American Psychiatric Association, DSM-IV-TR
Why Is Pedophilia Important In Our Understanding Of Child Sexual Abuse?

The child sexual abusers who develop pedophilia molest 88% of all child victims.

They commit 95% of the sex acts against children.

Abel, G and Harlow, N. The Stop Child Molestation Book
What Do the Child Sexual Abusers Do?
Adult Males’ Sexual Behavior, n=85,535

- Affairs: 36.1%
- Affairs with Strangers: 28.1%
- Use of Pornography: 27.3%
- Use of Prostitutes: 24.4%
- Child Sexual Abuse: 23.6%
- Window Peeping: 12.1%
- Public Exposure: 8.5%
- Public Masturbation: 7.1%
- Fetishism: 5.8%
- Obscene Phone Calls/Letters: 5.4%
- Sex with Animals: 5.2%
- Touching of Strangers in a Crowd: 4.9%
- Phone Sex: 4.1%
- Transvestism: 2.2%
- Rape: 1.8%
- Sexual Sadism: 1.7%

- Transvestism: 3.5%
- Sadism: 2.5%

Percentage With Behavior
How Do Molesters Molest?

- Have urges, desires or fantasies about molesting
- Put themselves in long-term proximity to children
- Are identified as an authority/coach, Minister, etc.
- Are alone with needy, dependent children over time
- Talk with the child about sex in a nonthreatening way
- Participate in activities that incorporate some nudity (looking at pornography)
- Move gradually from touching and fondling to genital contact, “as sex education”
- Convince the child that their behavior contributed to the sexual behavior (hold them in some way responsible)
Percent of Evaluated People Who Were Never Blamed But Molested a Child

- Adolescent Males: N=7,495, 35.2%
- Adolescent Females: N=356, 35.4%
- Adult Males: N=2,535, 8.0%
- Adult Females: N=1,155, 6.2%
The Essential Characteristics of Treatment For Paraphiliacs

1. Does it reduce the paraphiliac’s deviant arousal (CS, NH4)?
2. Does it normalize the paraphiliac’s other problems?
3. Can its outcome be evaluated objectively (visual reaction time, plethysmography)?
4. Can compliance with treatment be measured (polygraph, POs)?
5. Is it applicable to any paraphilia?
6. Can it be self-administered any time, any place?
The Essential Characteristics of Treatment For Paraphiliacs

7. Is its application cost-effective?
8. Can the average paraphiliac learn the treatment?
9. Can it be delivered in a reasonable time period?
10. Can other therapists easily learn the treatment?
11. Do outcome studies confirm that it stops reoffending?
12. Can it be applied ethically?
13. Does it have a theoretical foundation (cognitive behavioral treatment with a strong relapse prevention component)
Is Treatment for Adult Child Sexual Abusers Effective?

Yes
Treatment for Adult Child Sexual Abusers

93 to 95% can be successfully treated

Source: Stephen Gray, ED.D., presented at ATSA, 2011
Candace Osborne, MA and Gene G Abel M.D., presented at GATSA, 2004
Is Treatment for Adolescent Child Sexual Abusers Effective?

Yes
Treatment of Adolescent Child Sexual Abusers

93%
can be successfully treated

Margaret Alexander, 1999
What Increases the Likelihood That a Molested Child Will Molest Others?
The Majority of Sexually Abused Children Never Sexually Abuse a Child
Victimization Factors of Boys Who Became Sexual Abusers

A study of 2,811 sexually abused boys (777 non-abusers, 2,034 abusers)

1. I was younger than 9 when I was sexually abused.
2. I was abused by my idol.
3. I knew nothing about sex before I was sexually abused.
4. I wish the molestation didn’t bother me so much.
5. Sometimes I got a strong sexual feeling between my legs when I was being sexually abused.

Source: Child Molestation Research & Prevention Institute: 20,000 Children Preliminary Data
Victimization Factors of Boys Who Became Sexual Abusers

A study of 2,811 sexually abused boys
(777 non-abusers, 2,034 abusers)

6. The person who did this to me used to say lots of things about how great I was.

7. The abuser put their tongue in my mouth.

8. I took baths or showers with my sexual abuser.

9. Sometimes when my boyfriend or girlfriend rubs my chest I have flashbacks of when I was abused.

Source: Child Molestation Research & Prevention Institute: 20,000 Children Preliminary Data
Victimization Factors of Girls Who Became Sexual Abusers

A study of 476 sexually abused girls (232 non-abusers, 244 abusers)

1. Sometimes, when I hear a voice that sounds like my abuser, I get a feeling of terror.
2. I was younger than 9 when I was sexually abused.
3. I wish the molestation didn’t bother me so much.
4. I knew nothing about sex before I was sexually abused.
5. I was abused by my idol.

Window of Opportunity – With Sexually Abused Children

On average, we have four years between the sexual victimization and the first act of sexual abuse.

Therefore:
Between the ages of 7 years and 11 years is our opportunity to help the sexually abused child so that this child does NOT sexually abuse other children.

</table>
Conclusions

Those who use child pornography are more likely to molest children.

Those who solicit minors are more likely to molest children.

Those referred for child pornography or sexually chatting with/traveling to meet minors are less likely to *admit* to child molestation.

Those trying to present themselves in a positive light are less likely to *admit* to child molestation.
How Strong Are The Relationships Between These Sexual Activities and Child Sexual Abuse?

The odds ratio for Use of Child Pornography is 2.3
The odds ratio for Soliciting Minors is 4.3
The odds ratio for doing both is 9.9
### Number of Child Sexual Abuse Victims By Age Category of Pornography Viewed

<table>

</tr>
</tbody>
</table>

An ANOVA was run to test whether the number of victims was related to which type of child pornography they viewed. A one way ANOVA with three groups was run. The differences were not statistically significant ($f=1.1$, $df=2$, 137, $p < 0.3229$).
Is It Possible to Identify Those at High Risk to Molest Children And Block Them from Working with Children?
13 Juvenile Facilities were identified as having rates of 20% to over 30% of child sexual abuse of juveniles in custody; the national average was 10.3%
The Diana Screen® is a 30 minute pre-hire screen used to identify men and women in the general population who pose a sexual risk to children.
The Diana Screen®: National Results for Juvenile Justice

Nearly 700 prospective new hires were screened for sexual risk at juvenile facilities by The Diana Screen®

- 349 Women screened
- 340 Men screened
Results of Screening for Risk to Molest Children

• 90% Passed
• 10% Failed
• 66 Applicants failed
  – 28 Women failed
  – 38 Men failed
Similar results have been found with screening in the Episcopal Church, Catholic Church, Boys And Girls Club, hospitals treating youth.
Sentencing Commission’s Questions

1. What percent of offenders viewed child pornography for sexual gratification?
   We assume the majority.

2. What factors cause people to seek sexual gratification from child pornography?
   Earliest sexual experience, masturbatory fantasies, being abused and other factors, see

3. Do most offenders obtaining child pornography do it for sexual gratification or pedophilia tendencies?
   We assume yes for both.
4. Which are more likely to molest, pedophiles or non-pedophiles who obtain child pornography?
   We assumed pedophiles.

5. Do child pornography viewers have increased history of past sexual contact with minors?
   Yes, see study presented today.

6. Are there valid risk assessment instruments to predict sexual recidivism by child pornography offenders?
   No.
7. In the past, child pornography was intercepted by the Postmaster General on its arrival from Europe; now with a smart phone and a computer, individuals can take thousands of pictures of their nude girl or boyfriend or take pictures at the local water park, or download 5 GB of erotica over the Internet. The landscape for child pornography has shifted. Do the same laws related to sentencing still apply given the vast changes in technology?

8. **From this clinician’s viewpoint**, sentencing for child pornography (when no child has been abused) should be significantly less than for child sexual abuse but probation should remain.

9. **From this clinician’s viewpoint**, the criminal justice system must prepare to deal with more 12 to 17-year-olds generating, obtaining, and viewing child pornography.
Going “Upstream” to Prevent Child Sexual Abuse

1. Behaviors preceding interest in children
2. Being sexually abused preceding abuse of others
3. Screening for adults with risk of sexually abusing
4. Training how to identify abused/abuser
5. Therapy for abused and abuser
