COMMISSION***

**VARIABLE CODEBOOK
FOR ORGANIZATIONAL CASES**

**STANDARDIZED RESEARCH
DATA DOCUMENTATION FOR
FISCAL YEAR 2000-2018**

INTRODUCTION

The United States Sentencing Commission is an independent agency in the judicial branch of government. Its principal purposes are: (1) to establish sentencing policies and practices for the federal courts, including guidelines to be consulted regarding the appropriate form and severity of punishment for offenders convicted of federal crimes; (2) to advise and assist Congress and the executive branch in the development of effective and efficient crime policy; and (3) to collect, analyze, research, and distribute a broad array of information on federal crime and sentencing issues, serving as an information resource for Congress, the executive branch, the courts, criminal justice practitioners, the academic community, and the public.

Understanding the federal sentencing guidelines is crucial to properly using the Commission's data. To learn more about the Commission and the federal sentencing guidelines, please visit the Commission's website, <https://www.ussc.gov/>. The Commission's website makes available ALL the guideline manuals (both current and past) at <https://www.ussc.gov/guidelines/archive>. Using multiple years of Guidelines Manuals is necessary for most guideline analysis due to yearly amendments in the guidelines. In a single fiscal year of data, offenders are sentenced under different amendment years of Guidelines Manuals.

In addition, the Commission's website has publications which discuss various topics available at: <https://www.ussc.gov/research/topical-index-publications>. In addition, guideline training primers are available at: <https://www.ussc.gov/guidelines/primers>. Additional education and training about the federal sentencing guidelines is available at: <https://www.ussc.gov/education>.

The United States Sentencing Commission collects demographic, sentencing, and guideline application information on cases which are sentenced under the guidelines in the federal court system. The Commission has many data publications available such as:

- 1) The *Annual Report and Sourcebook of Federal Sentencing Statistics*
<https://www.ussc.gov/research/sourcebook/archive>
- 2) District or circuit-based analysis as compared with national statistics
<https://www.ussc.gov/research/data-reports/geography>
- 3) Frequencies about guideline application information
<https://www.ussc.gov/research/data-reports/guideline>
- 4) Commission reports which were sent to Congress
<https://www.ussc.gov/research/reports-congress>

This codebook contains information on variables which come directly from the organizational offender's database created in the Office of Research and Data (ORD). The Commission switched data entry systems for organizations from FoxPro to Oracle in fiscal year 2000, and several significant variable and coding changes were instituted. Therefore, this codebook covers only the fiscal years since the 2000 datafile. The Commission has an older standardized research codebook for fiscal years 1992-1999 which is available upon request.

The Commission's datafiles are available for download back to FY2002 in either SPSS or SAS formats at <https://www.ussc.gov/research/datafiles/commission-datafiles>.

How to Use the USSC Codebook

The first column in the codebook, NAME, lists the name of each variable in alphabetical order. Under the variable names, the corresponding research variable name (if one exists) will be listed as: R=Research variable name. The research variables are generally those used in the Commission's publications such as the *Sourcebook of Federal Sentencing Statistics*.

The second column, ORIGIN, lists the source of the variable. Variables are either taken from specific documents submitted by the courts, or produced by ORD based on data collected from the source documents. This column also includes information on the source document of the raw data. The following list defines the codes for variable origins.

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information is taken mainly from the indictment/information.
- R indicates the information is generated from other variables. These are referred to as the "research variables".

The third column, FORM, describes whether the variable is coded as numeric (NUM), character (CHAR), or date (DATE). This column also lists the length of each variable.

The fourth column, CODES, lists all the values for each variable and describes what those values mean. Some of the variables have a large number of values, so these values are listed in Attachment A at the end of the codebook.

The final column, DESCRIPTION, describes the uses and creation of each variable. This column also contains notes which caution users about variables which have changed definitions from previous years, or not contained on all years of the data sets. Format statements are also included in bold at the end of each description. These formats will allow users to access the format statements. Since SAS format

statements cannot end in a number, all variables which end in a number "1" will have format statements that end with an "O". Variables which end with a "2" will have format statements ending in "T."

Attachments have been included at the back of the codebook to elaborate on variable information. A code attachment which provides values of lengthy variables follows the codebook.

EXPLANATION OF THE CURRENT GUIDELINE CODING SYSTEM

So that the Commission could have access to more guideline cross reference information, the types and quantity of guideline-related data changed in FY2004. From FY2004 through FY2011, Commission staff record guideline application information about four types of guidelines: Statutory, Reference, 2nd Cross-Reference, and Sentencing. In FY2012, a third Cross-Reference Guideline was added. Please See Chapter One in the USSG Manual (<https://www.ussc.gov/guidelines/2018-guidelines-manual>) for more information about the federal guideline system, determining the appropriate guideline, and guideline application order.

The first guideline coded is known as the statutory guideline (GDSTAT1-GDSTATX, GDSTATHI). This guideline is based on the statute(s) of conviction. GDSTAT is the first guideline checked for applicability by the probation officer from the statutory reference list in the back of the *USSG Manual*. All aspects of the statutory guideline are coded (*i.e.*, base offense level and adjustments).

The next guideline is the 1st reference guideline (GDREF1-GDREFX, GDREFHI), coded when applicable. This guideline is only used when the statutory guideline (GDSTAT) refers the probation officer to another guideline (ex. If the statute of conviction is 21:843(b), then the probation officer would go in the *USSG Manual* to 2D1.6 (the GDSTAT1 guideline)). This guideline then refers the probation officer to 2D1.1 (the GDREF1 guideline) in order to find the correct base offense level. All aspects of the reference guideline are captured (*i.e.*, base offense level, specific offense characteristics, and Chapter Three adjustments).

There is also an option to code a 2nd reference guideline (GDCROS1-GDCROX, GDCROSHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to another guideline which then cross-references to a third guideline. All aspects of the cross reference guideline are coded (*i.e.*, base offense level, specific offense characteristics, and Chapter Three adjustments).

The fourth guideline captured is the 3rd reference guideline (GDUNDR1-GDUNDRX, GDUNDRHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to a 2nd guideline which then cross-references to a 3rd guideline, and then a 4th guideline. All aspects of the 3rd cross reference guideline are coded (*i.e.*, base offense level, specific offense characteristics, and Chapter Three adjustments).

The guideline which best explains the sentence (*i.e.*, the last guideline which increases or decreases the offense level) is known as the sentencing guideline (GDLIN1-GDLINX, GDLINHI). The GDLIN will always be the same as one of the other three guidelines (GDSTAT, GDREF, or GDCROS). The GDLIN will be the same as the GDSTAT if no reference guideline (GDREF) is used. All aspects of the sentencing guideline are coded (*i.e.* base offense level, specific offense characteristics, and chapter three adjustments). Most cases do not contain any cross-references so the GDSTATHI and the GDLINHI will be the same and the GDREFHI and the GDCROSHI will both be blank.

Note that cases can have multiple guideline computations (these will not necessarily match up with the number of counts of conviction - see *USSG Manual* for grouping rules). The first computation is denoted with a "1" at the end of the guideline fields (*i.e.*, GDSTAT1, GDREF1, GDCROS1,

UDUNDR1, and GDLIN1). The case on the fiscal year datafile with the largest number of guideline computations determines the “top” number for the cases in that year (*e.g.*, If in FY2004 there was a case with 27 computations then all cases on the datafile would have GDSTAT1-GDSTAT27, GDREF1-GDREF27, GDCROS1-GDCROS27, and GDLIN1-GDLIN27). **Since the “top” or highest number of computations changes every year, the guideline variable names end in “X”.** Users can view the variable NOCOMP (number of computations) to determine how many computations occurred in each case as well as the “top” number for a given year.

The “high” or primary guideline is determined by the computation with the highest adjusted offense level for the sentencing guideline (ADJOFL1-X) and is called GDLINHI. GDLINHI is often used as selection criteria in the Commission’s data and research publications.

EXAMPLES OF THE GUIDELINE CODING SYSTEM:

1. If the defendant was convicted of one count of selling drugs near a school, then the GDSTAT1 would be §2D1.2, the GDREF1 would be §2D1.1, and the GDLINE1 would be §2D1.2. The GDCROS1 and GDUNDR1 guidelines would be blank since there was not another cross-reference. The GDLINEHI would be §2D1.2 since this guideline adds levels to the underlying offense levels from §2D1.1, so §2D1.2 is the primary sentencing guideline.
2. If a defendant was convicted of one count of selling drugs near a protected location while on supervised release, then the PO starts at §2J1.7 (Commission of an offense while on release) which says to go to the underlying offense. §2J1.7 is the GDSTATHI. The underlying offense (GDREFHI) is §2D1.2 (Drug Offenses near a protected location) which cross-references (GDCROSHI) the PO to §2D1.1 (Drug Trafficking) to get the offense level based on the drug quantity table. The GDUNDRHI variable will be blank since there is not another cross-reference guideline. Since the PO must go back to §2J1.7 to add the three points from this guideline after applying both §2D1.1 and §2D1.2, then the final sentencing guideline (GDLINEHI) is §2J1.7.

COLOR CODING CONVENTIONS FOR GUIDELINE COMPUTATION VARIABLES:

The variable name column in the codebook uses the following color convention for variables associated with the guideline application: black text for the sentencing variables, red text for the statutory variables, blue text for the reference variables, green text for the cross-reference variables, and purple text for the 3rd reference variables. Here is an example using the guideline application variables:

**GDLINE1-GDLINEX,
GDLINEHI**

**GDSTAT1-GDSTATX,
GDSTATHI**

**GDREF1-GDREFX,
GDREFHI**

**GDCROS1-GDCROSX,
GDCROSHI**

**GDUNDR1-GDUNDRX,
GDUNDRHI**

When doing a guideline analysis, choose variables that correspond to one another. For example, if the analysis is using the primary sentencing guideline (GDLINEHI), then choose the corresponding base offense level variable for the primary sentencing guideline (BASEHI). *Pairing non-corresponding variables (ex. Primary sentencing guideline (GDLINEHI) with the primary reference base offense level (BASEHI)), will result in incorrect analyses.*
